

LiveEdge® Stream

The LiveEdge® Ecosystem is best tool for optimization and enhancement of live video workflows — providing scalable container-based compute at the source.

Whether you need the latest live video streaming functions, control, monitoring, advanced compute, or a unique container designed by you, LiveEdge® doesn't just make it possible — it makes it quick and easy.

Adapt

Live video workflows are constantly evolving, LiveEdge® provides the flexibility to innovate and solve whatever problems you face today and tomorrow.

Empower

Not all functions are better in the cloud. LiveEdge® allows for quick concepting and rollout of cloud functions on-premises, in an array of portable devices and form factors.

Simplify

Keep it simple. LiveEdge® makes complex workflows easy and reliable. Perfect for normalizing metadata, synchronizing and monetizing feeds.

Benefits: LiveEdge® Stream

- Create workflows and stream faster without sacrificing quality
- Deliver near-real-time streaming with RTMP to WebRTC
- Sub-second workflows via SRT
- Reduce glass-to-glass latency to less than 500 ms
- Remove cloud processing latency and usage fees with player-ready video output
- Eliminate cloud encoding, transcoding/transrating, and packaging with HLS/DASH and Multi-Bit-Rate ladders.
- Extensively tested and seamlessly integrated with leading CDNs and video players (AWS, Akamai, Fastly, NexPlayer, CastLabs, and THEO).
- Comprehensive workflow test reports
- Standards-based HLS/DASH/CMAF
- Industry recognized SRT for modern point-to-point workflows and fast, reliable cloud ingest.
